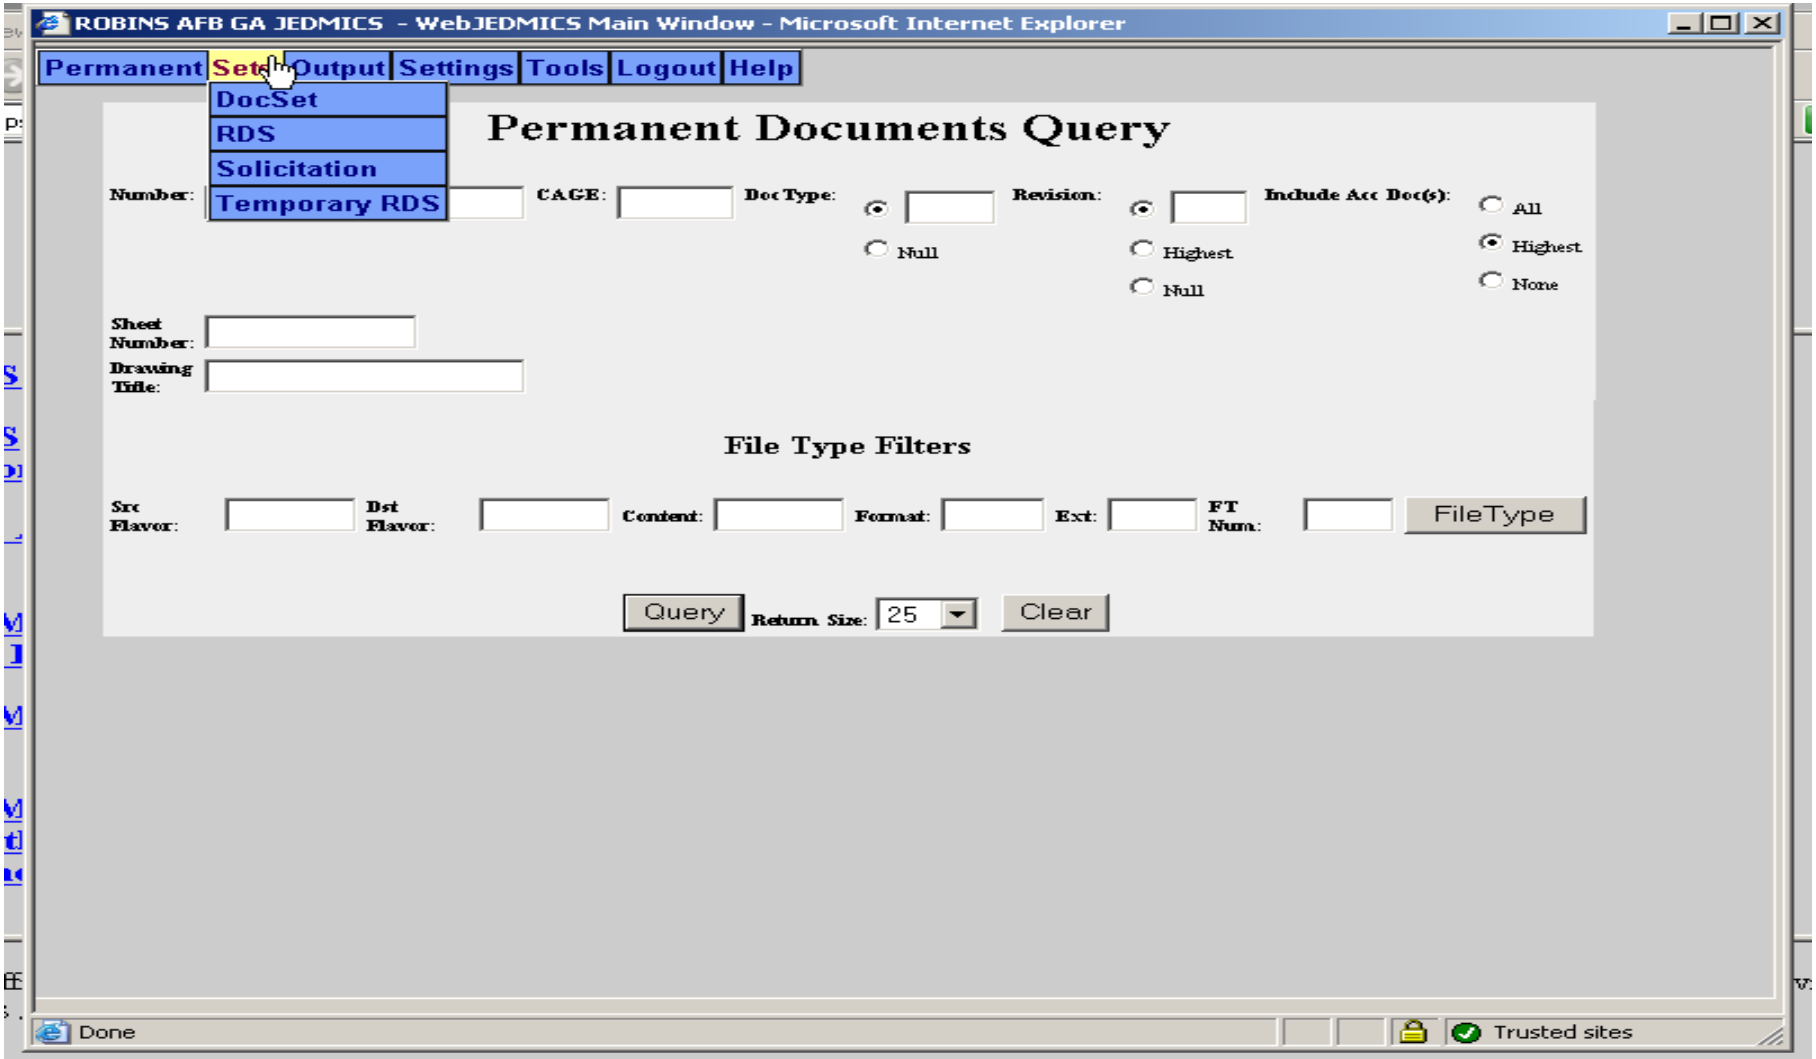
Building Temporary RDS (TRDS)

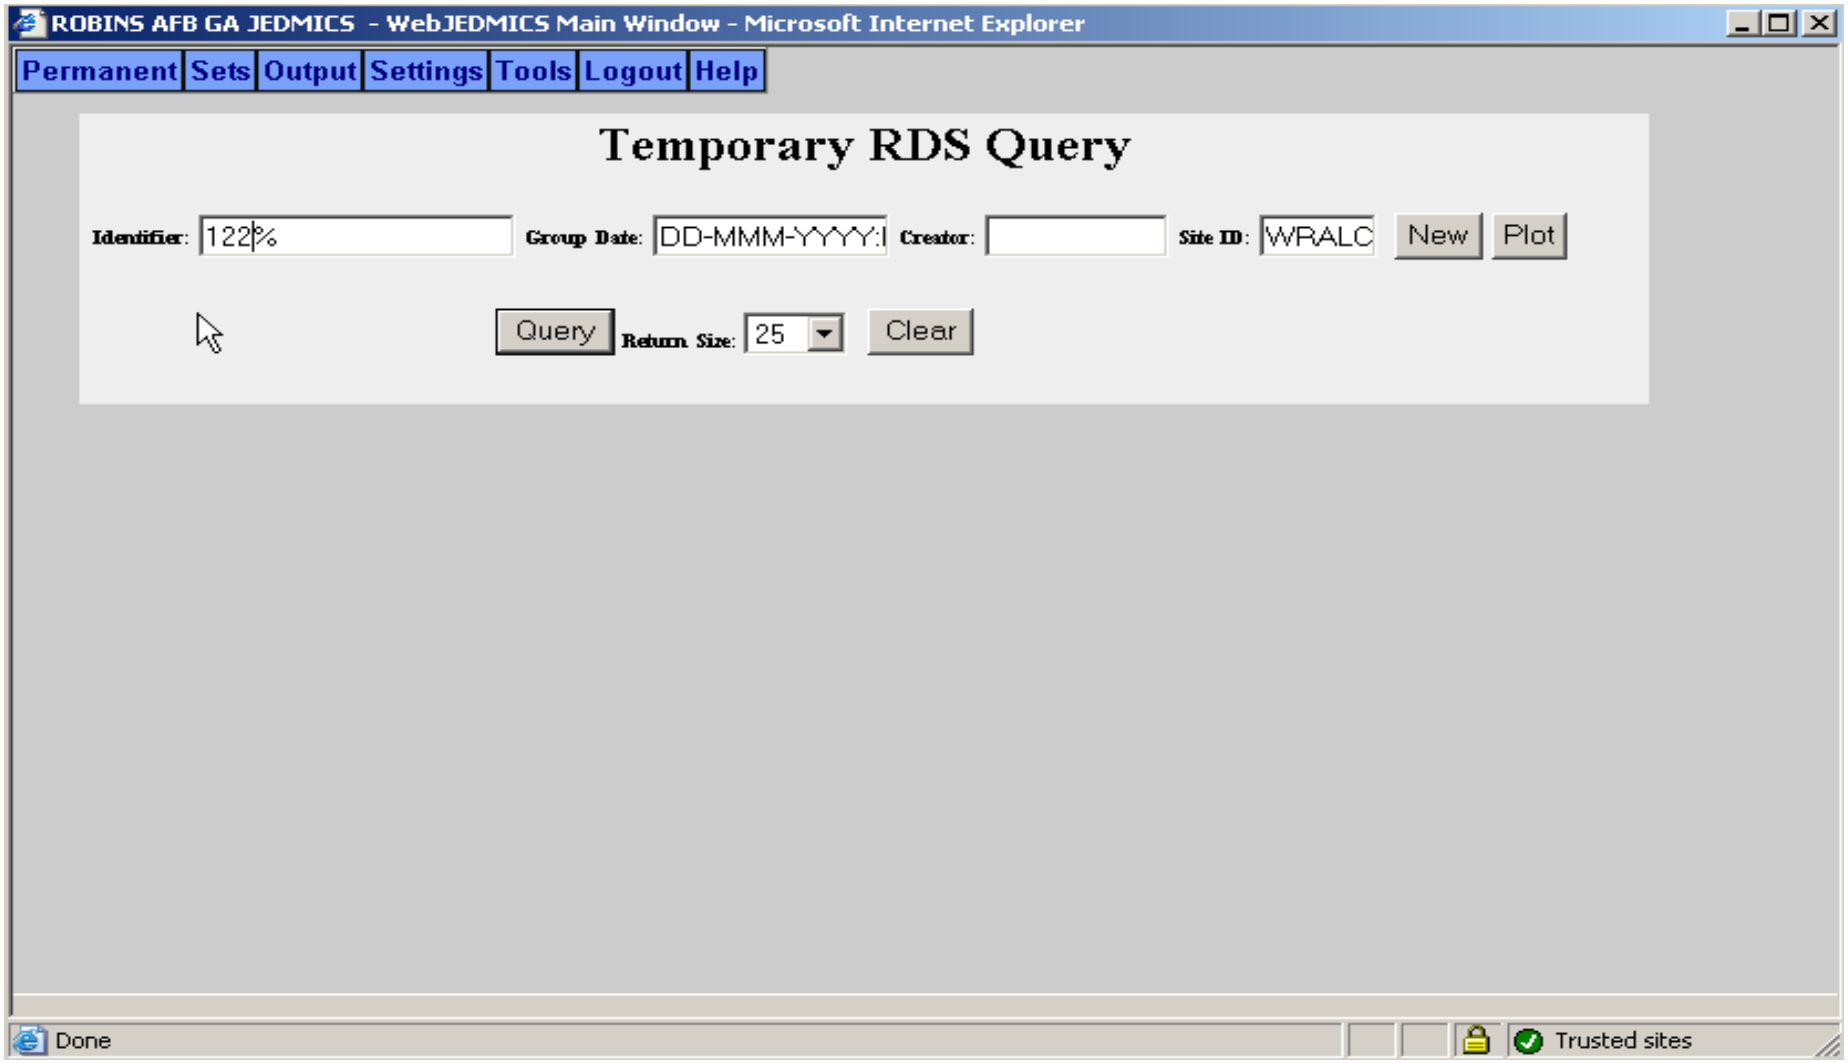
A TRDS is created if your requirement is to view or print large quantities of images.
They are maintained for 7 days, then automatically deleted.

- To batch download multiple drawings:
- Sign in to WebJEDMICS – from the SETS tab select Temporary RDS.

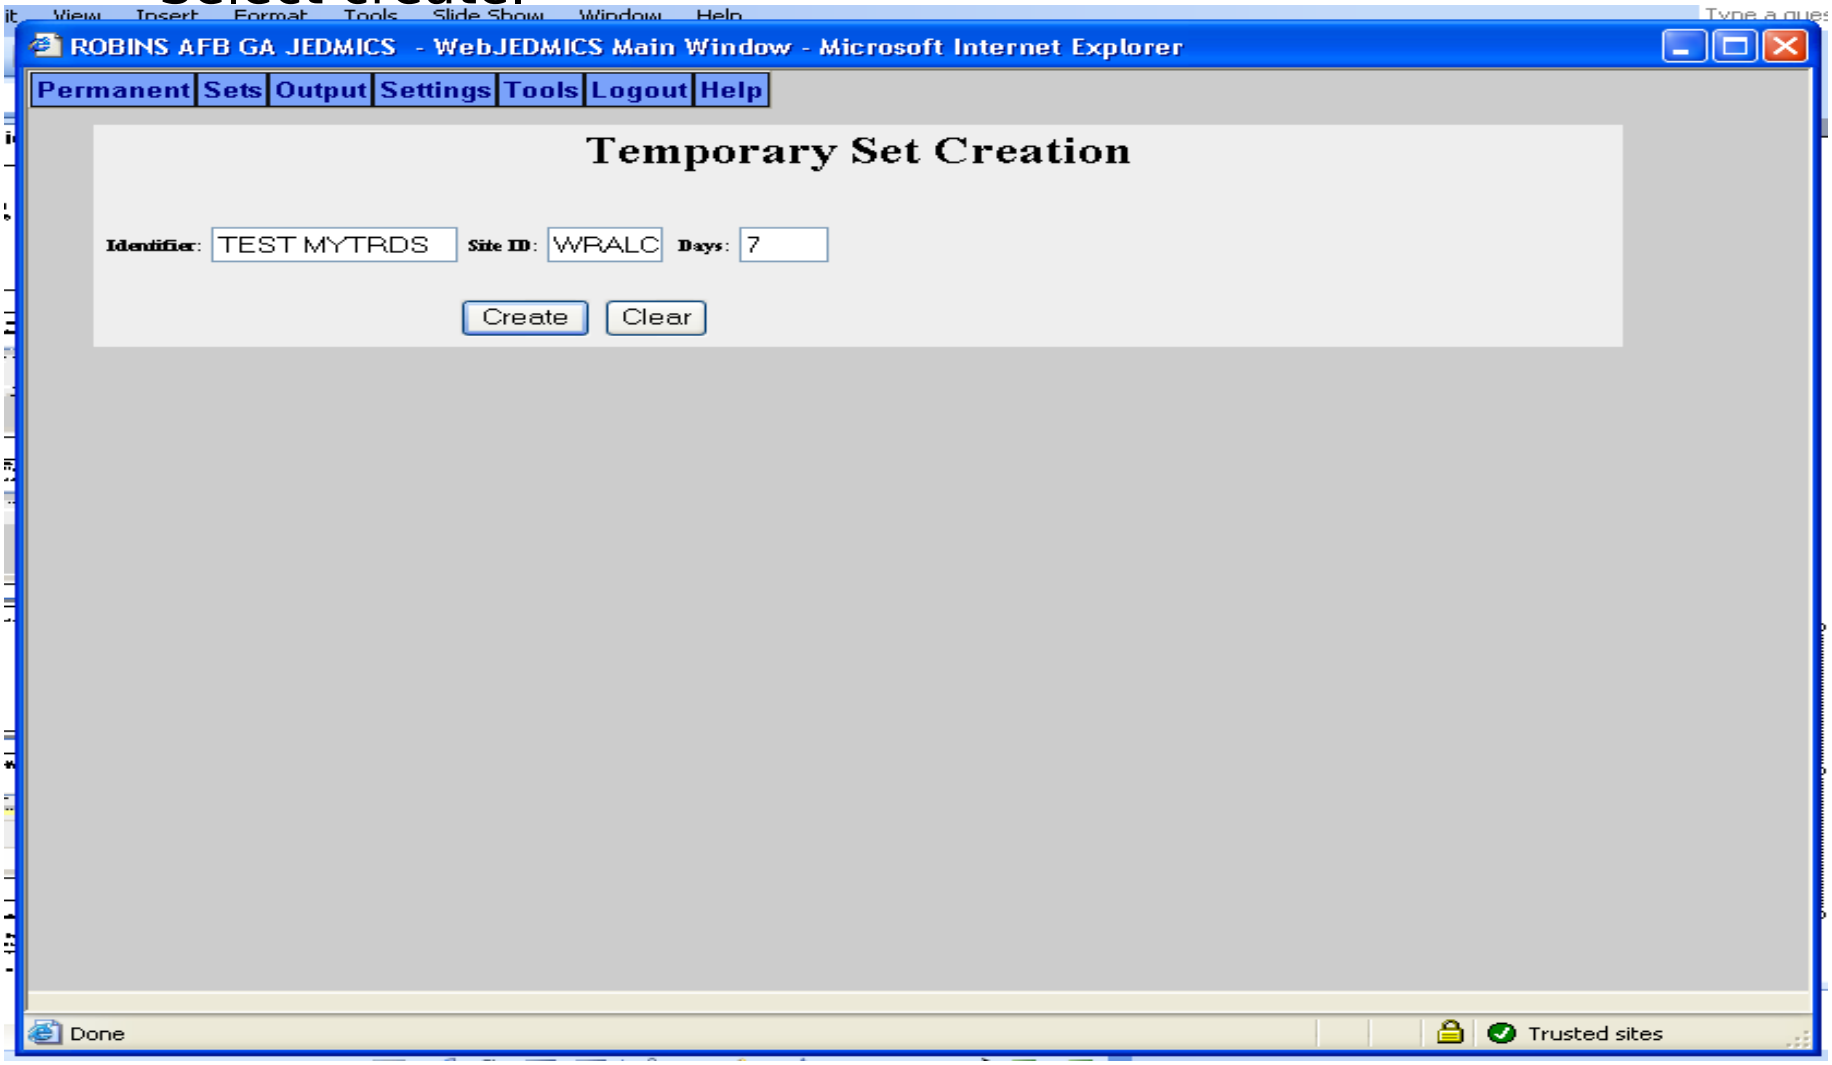


Temporary RDS

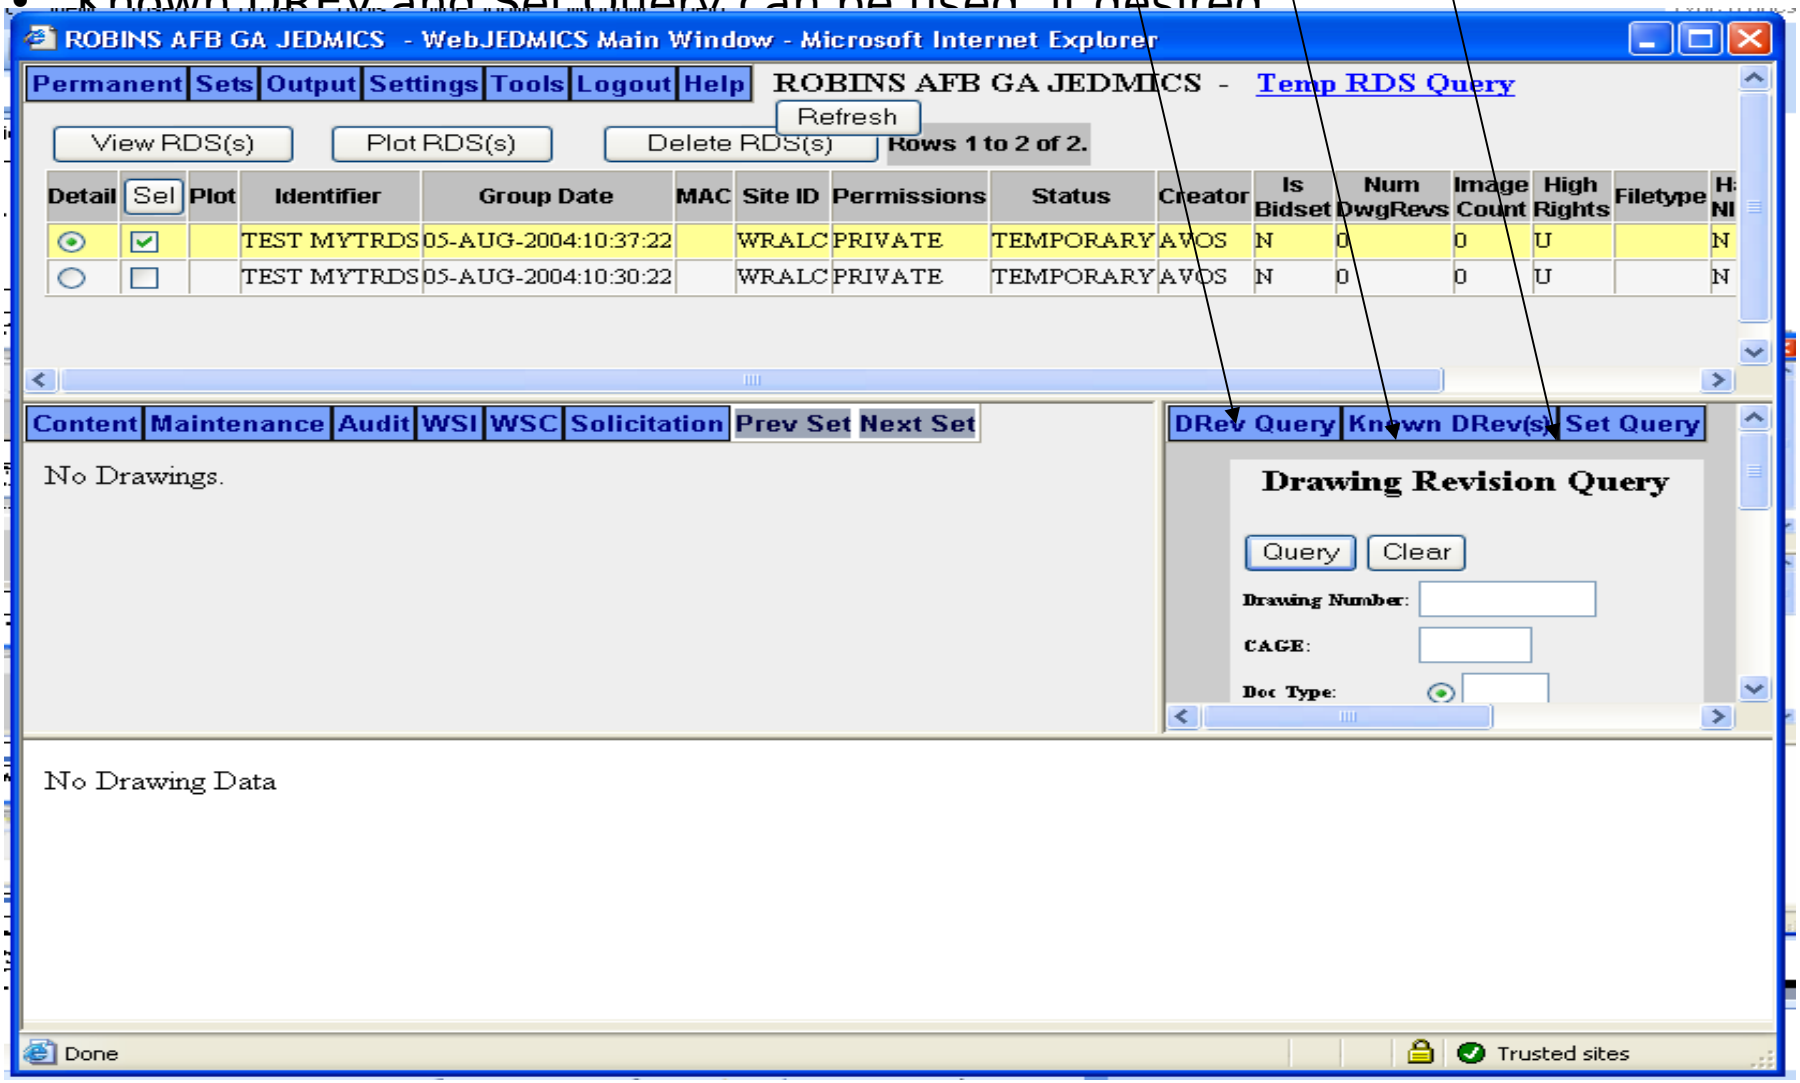
- Fill in Identifier and verify that the Site ID is your Site ID, then select New. (Recommend that you use your name plus numerical sequence.)
- Or Query on a known Temp RDS – the percentage sign can be used as a wild card.
- Or Query on Creator. (This is your userid.) “You can only access your TRDS.”



- The number of Days (time limit before expiration) for this Temp RDS can be changed if project requires. Do not set greater than 30 days.
- Select create.



- In the middle right window the most common method used to add drawings to the TRDS is DREV Query. You only need to know 3 characters of the drawing number plus the % wildcard to perform a query.
- Known DREV and Set Query can be used, if desired



• Enter dwg num in the **DRev Query** screen and fill in any additional fields by using the scroll bar to define the dwg search.

<Select> Query

(**Note**: Only three characters plus the wildcard (%) are required for this search.)

Now select Add, this will add all the images in that dwg number to the TRDS.
<Select> OK.
The drawings added will appear on the left side of the middle window.

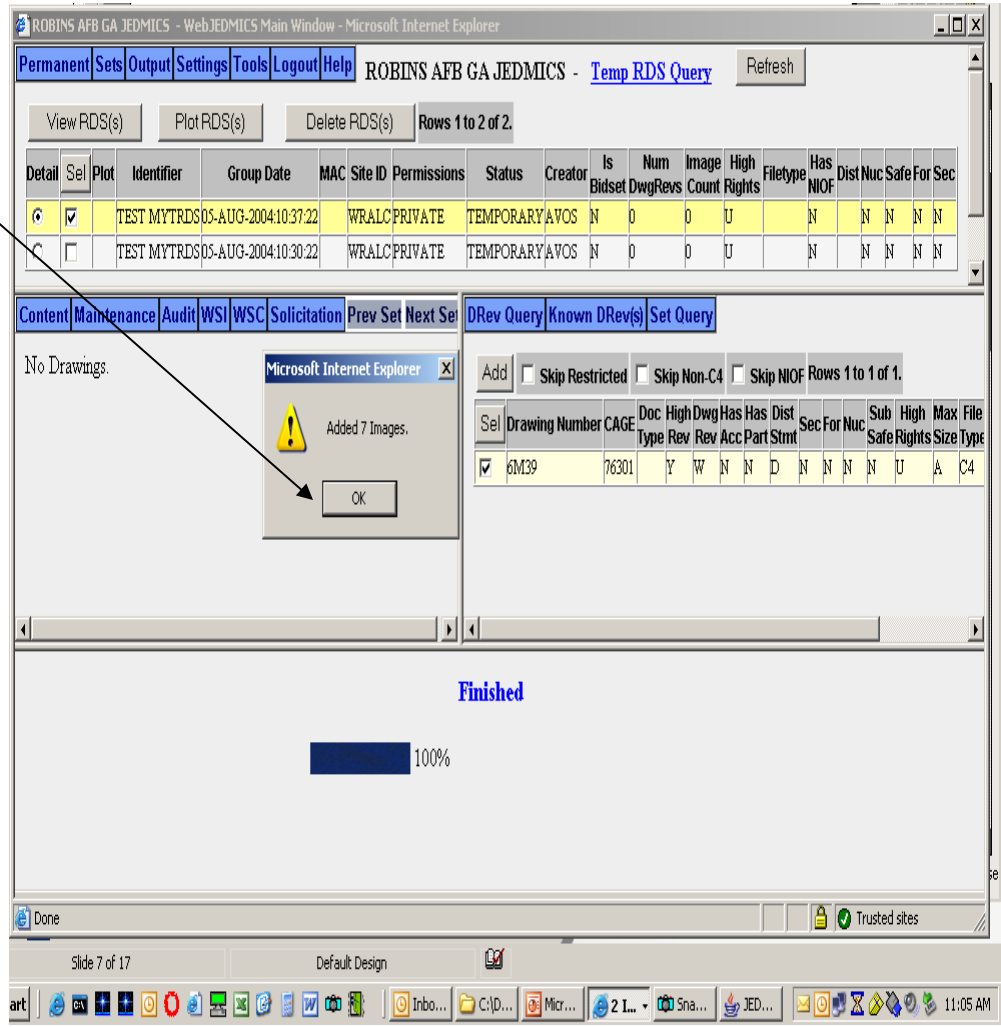
Default Design



The name of the TRDS appears (top window), the dwg's in the TRDS (middle window), and the image list (bottom window).

The images selected are now in the TRDS. More dwgs can be added if

If the number of days to keep a TRDS needs to be greater than 7 (the default), select the Maintenance tab and modify the “Expires in Days” value.

Do not set this number greater than 30 days.
